CLOUD MIGRATION SERVICES & STARTER PACKS

Within the next 12 months, 69% of workloads and 67% of data will reside in public cloud. And yet, despite this cloud growth, many organizations' cloud migration plans stall. These stats explain the reasons behind this:

- **51%** organizations struggle with app-dependencies
- **48%** facing issues migrating apps and data are unable to assess technical feasibility
- **36%** have problems prioritizing apps to migrate

KEY CONSIDERATIONS ON YOUR JOURNEY TO THE CLOUD

SKILLS & RESOURCES

- Do you have the skills and resources to ensure a good foundation is set up? Do you have the internal skills and capacity to complete a migration to the latest cloud technologies, while also keeping your business running and optimized?

MAPPING APPS

- Do you understand how to map all the relationships across apps and networking devices to ensure your future cloud environment is optimized and efficient?

SECURITY PRIORITIES

- How are you ensuring your workloads remain secure during a migration? Have you considered cloud security, legislation and regulatory requirements?

MIGRATE VS MODERNIZE

- How do you make informed decisions as to which apps to migrate and what architecture they should have in the cloud? Which apps should be modernized or retired?

HOW TO OPTIMIZE

- Cloud migration is not something you want to do twice! How can you be sure each application is migrated in the right way the first time, and then optimized for cost and benefit?

Regardless of whether you choose Azure or AWS as your cloud platform of choice, or whether you are looking to start or accelerate your migration to cloud, SoftwareONE Cloud Migration Solutions provide a range of service modules to help you assess, plan and execute your cloud migration.

1. START WITH CLOUD STARTER PACKS

Our **Cloud Starter Pack** - for customers new to the cloud who want a solid foundation - or **Cloud Acceleration Pack** – for customers in the cloud who want to mature their approach and adoption, are short engagements to kickstart and accelerate your cloud journey.

WHAT'S INCLUDED?

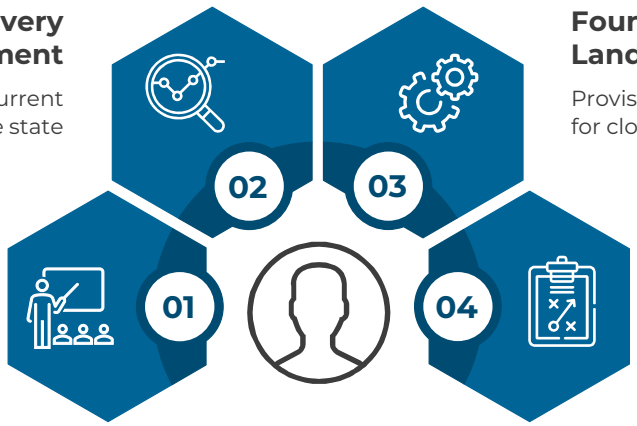
CLOUD STARTER PACK

Server Discovery & Assessment

Compare TCO between your current and future state

Foundational Landing Zone

Provisioning of the basic building block for cloud adoption



Governance Fundamentals

Consultant led workshop to learn how to implement cost and security guardrails in your cloud subscriptions

Results, Recommendations & Next Steps

Executive presentation of results, recommendations and next steps

Customers new to the cloud platform that want a solid foundation to start their cloud adoption journey

CLOUD ACCELERATION PACK

On-premises & Cloud TCO Comparison

Server Discovery & Assessment to compare TCO of moving workloads still On-Premises to cloud

Cost Optimization Proof of Value

See real examples of your organization's cost savings forecast in our FinOps Platform

Well Architected Assessment

Consultant-led Well Architected workshop and prioritization assessment

Results, Recommendations & Next Steps

Executive presentation of results, recommendations and next steps

Customers already started using cloud, but want to accelerate and mature their approach to usage and adoption

2. WHERE TO AFTER THAT?

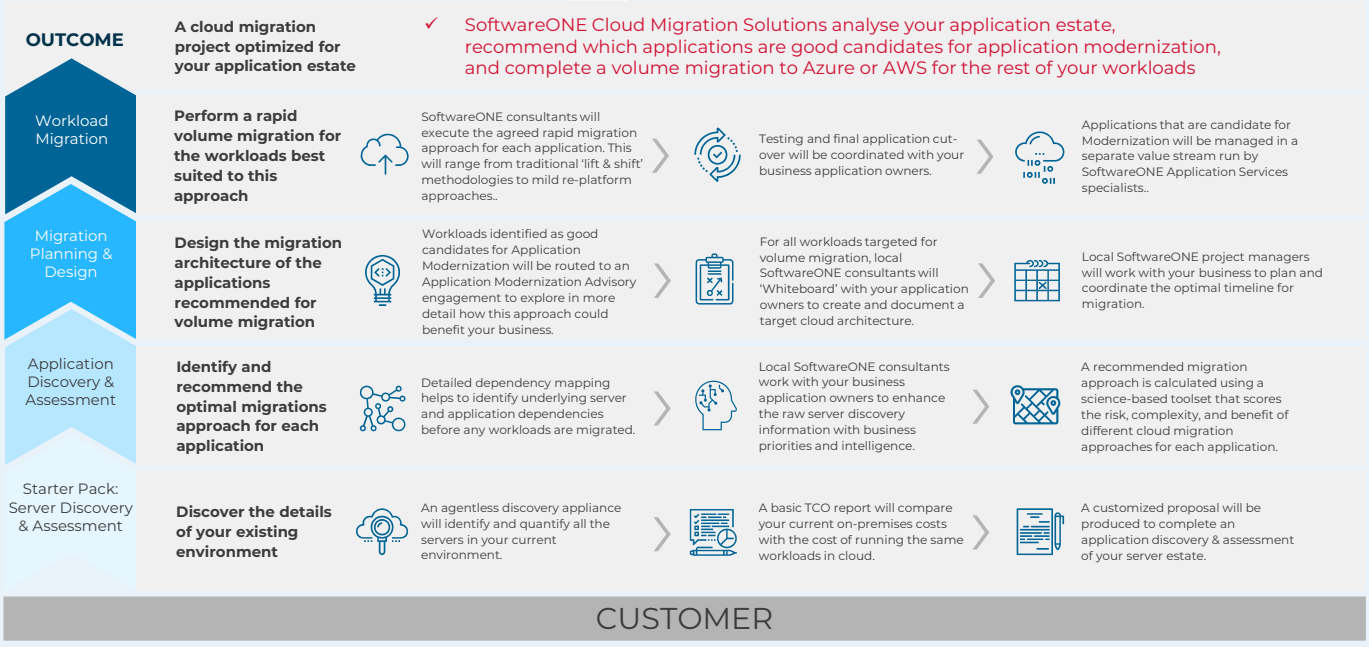
SoftwareONE will work with you to discover the cloud-eligible workloads within your current on-premises environment.

- This involves automated toolsets that discover servers and applications, and map dependencies between them, combined with a structured approach to gather the “soft data” and knowledge about the application in question that only the business application owner will know.
- Both of these data sources are then analyzed, and the risk, complexity, and benefit of various cloud migration approaches are calculated - resulting in a recommended migration strategy for each application.

Once the per-application strategy is identified, SoftwareONE will help you plan and design the exact migration steps required, and then can help execute the migration of each workload.

- There are various migration approaches that SoftwareONE can assist with, ranging from a ‘commodity migration’ approach for low complexity “lift & shift”-type migrations, through to full application modernization approaches delivered by the SoftwareONE Application Services teams. See the chart for details.

SOFTWAREONE CLOUD MIGRATION APPROACH



3. THE BIG PICTURE

SoftwareONE can support you on your entire cloud journey. We provide ongoing Managed Cloud and Managed FinOps services to help you optimize your cloud environment on an ongoing basis.
